

MODULE 5 PROJECT

Classification Modelling of NFL Rushing Plays

OBJECTIVE

Build a model to predict whether a given rushing play will be successful.

ABOUT THE DATA

- **NFL Next Gen Stats**
- **Player Tracking Data**
- **At time of handoff**
- **2017, 2018, and 2019 (week 12)**
- **NFL Big Data Bowl**
- **Revised to Classification**

METHODOLOGY

01

Obtain

02

Scrub

03

Explore

04

Model

05

Interpret

MEASUREMENT

1st Down: 40%

2nd Down: 60%

3rd & 4th Down: 100%

SUCCESS BY DOWN

Successful Run by Down (Play Count)

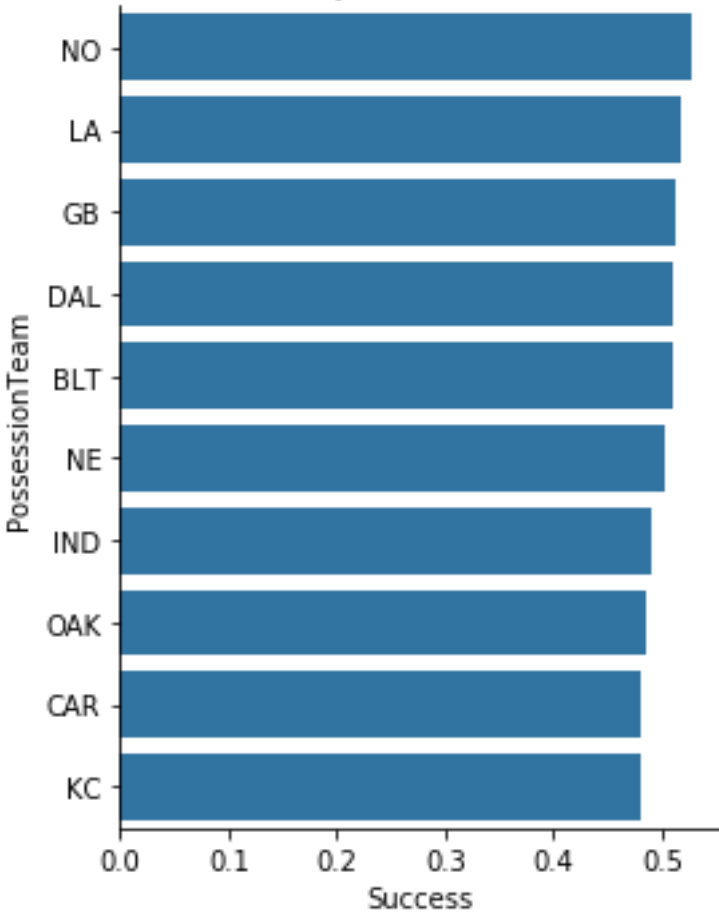

Successful Run by Down (Percentage)

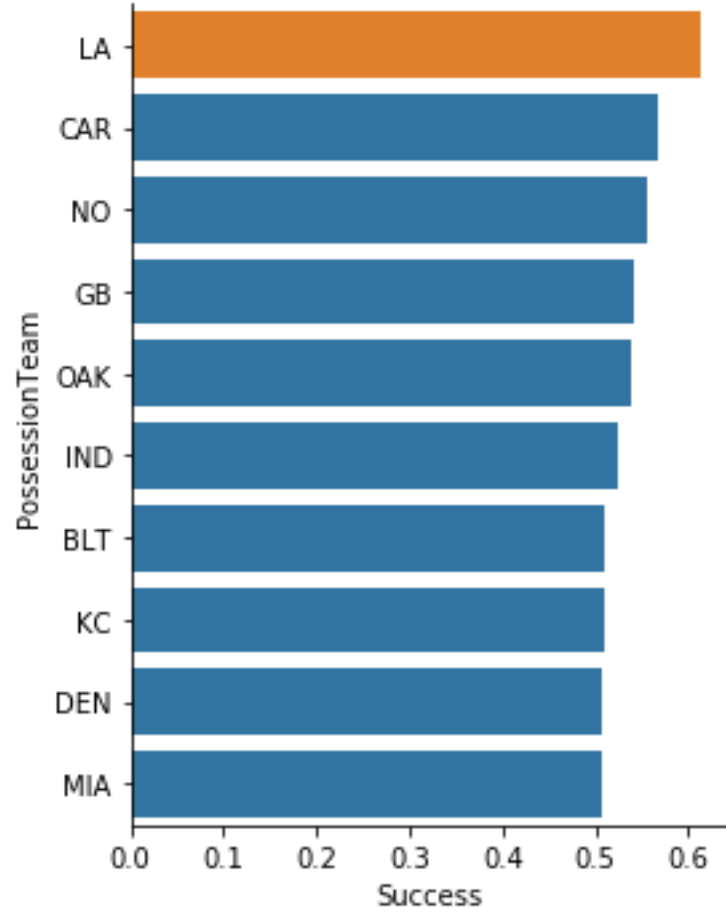

SUCCESS BY TEAM

Success Percentage by Team

2017-2019 Seasons: All Plays
Top 10 Teams

2018 Season: 1st Down and 10
Top 10 Teams

BEST PLAY IN THE DATASET

December 6 2018. Titans vs Jaguars
Derrick Henry Rushes for a 99 Yard Touchdown

RESULTS

MODEL PREDICTIONS

66%

Accuracy

60%

F1 Score

Are predictions accurate and
are they and comprehensive?

Predictions vs Actual

FEATURE IMPORTANCE

RECOMMENDATIONS

- **Acceleration Emphasis**
- **Defenders in the Box**
- **First Down Focus**
- **Position Experiment**
- **Season Changes**

NEXT STEPS

- **Feature Experiment**
- **Additional Data**
- **Hypothesis Test**
- **Season to Season**
- **Injury Impact**
- **Conditional Analysis**
- **Advanced Data Generation**

THANK YOU
